Ideation Phase: Define the Problem Statements

Field	Details
Date	02 November 2026
Team ID	N/A (Individual Project)
Project Name	EV Value & Longevity Analytics Dashboard
Prepared by	Piyush Malviya
Maximum Marks	2 Marks

The problem statements below describe the main users of the dashboard, the situation they are in and what gets in their way.

Customer Problem Statement Template

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A Fleet Procurement Manager	Choose which EV categories to buy for a company fleet within a fixed budget	I cannot easily compare how much range I get for each dollar across categories	Prices, ranges and battery data sit in large raw tables with no combined view	Unsure and worried about overpaying or buying vehicles that need early battery replacement
PS-2	An EV Pricing and Product Analyst	Position a new model's price against competitors	I cannot see how price relates to range and which manufacturers are priced fairly	There are 15 categories and 200 manufacturers, and no benchmark view exists	Uncertain and under pressure to justify a price
PS-3	A Sustainability Lead	Pick vehicles whose batteries last and are safe	I cannot tell which battery chemistries last longest or how safety ratings are spread	Cycle life and degradation figures are not summarised by chemistry	Concerned about long-term cost and risk

Problem Summary

Across all three statements the gap is the same: the data exists (200,000 vehicles and 37 attributes) but is not turned into comparable measures. This project provides those measures in one interactive dashboard.
