Project Name	EV Value & Longevity Analytics Dashboard
Prepared by	Piyush Malviya
Maximum Marks	4 Marks

Empathy Map Canvas for a Fleet Procurement Manager.

1. WHO are we empathizing with?

- User: A Fleet Procurement Manager at a mid-sized company, accountable for the cost and uptime of 50 to 500 vehicles.
- Situation: Needs to recommend which EV categories and battery types to add to the fleet this year.

2. WHAT do they need to DO?

- Compare price, range and battery life across vehicle categories.
- Keep total cost of ownership low and avoid early battery replacement.
- Prove the choice to finance and management with clear evidence.

3. WHAT do they SEE?

- Manufacturer brochures that quote the best-case range.
- Spreadsheets with hundreds of models and no common measure.
- Competing fleets announcing electric transitions.

4. WHAT do they SAY?

- "How much range do I really get for each dollar?"
- "Which battery will still be healthy after five years?"
- "I need one page I can show the committee."

5. WHAT do they DO?

- Copy numbers from several sources into a single sheet by hand.
- Ask suppliers for data and wait for replies.
- Fall back on brand reputation when the numbers are unclear.

6. WHAT do they HEAR?

- Finance asking for a lower cost per vehicle.
- Drivers worried about range on long routes.
- News about new battery chemistries such as Sodium-Ion and Solid-State.

7. WHAT do they THINK and FEEL?

- Pains: fear of overpaying, fear of buying a battery that degrades early, too much data and too little time.
- Gains: a single trustworthy view of value, durability and safety, so they can decide with confidence and defend the choice.
