Project Initialization and Planning Phase: Proposal

Field	Details
Date	02 November 2026
Team ID	N/A (Individual Project)
Project Name	EV Value & Longevity Analytics Dashboard
Prepared by	Piyush Malviya
Maximum Marks	3 Marks

This proposal describes the problem, the planned solution and the resources needed to build the EV Value and Longevity Analytics Dashboard.

Project Overview

Category	Details
Objective	Design and publish an interactive Tableau dashboard and story that compare EVs on price, range, battery life and safety.
Scope	Validate two CSV files, create calculated fields (Value Index and averages), build nine worksheets, assemble a dashboard and story, and publish to Tableau Public.
Problem Statement	Fleet buyers and pricing analysts cannot easily compare EV value across 15 categories and 200 manufacturers.
Impact	Faster, evidence-based purchase and pricing decisions; lower risk of overpaying or choosing short-lived batteries.
Approach	Load train data, validate against the test file, build worksheets with averages and a Value Index, add filters, publish.
Key Features	KPI tiles, Value Index, battery longevity comparison, manufacturer leaderboard, country and region views, 5-chapter story.

Resource Requirements

Resource Type	Description	Specification / Allocation
Hardware: Computing	Laptop CPU/GPU	Windows 11 laptop (add exact CPU and GPU)
Hardware: Memory	RAM	8 GB or more recommended for 200,000-row extracts (add yours)
Hardware: Storage	Disk for data and workbook	About 1 GB free (train CSV about 45 MB when unzipped, test CSV 22 MB)
Software: BI Platform	Analytics and publishing	Tableau Public
Software: Tools	Desktop building and validation	Tableau Desktop (Public edition), Python with pandas
Software: Environment	Operating system	Windows 11
Data: Source	Format and size	Two CSV files with 37 columns: 200,000 rows (train, supplied as .gz) and 100,000 rows (test)
Personnel	Roles	Piyush Malviya as analyst, developer and presenter
