# Communication Skills and Plan

| Field | Details |
|---|---|
| **Date** | 02 November 2026 |
| **Team ID** | N/A (Individual Project) |
| **Project Name** | EV Value & Longevity Analytics Dashboard |
| **Prepared by** | Piyush Malviya |
| **Maximum Marks** | 1 Mark |

Data only helps when the right person can understand it quickly. This plan explains who the dashboard is for, what it should tell them and how the work is shared and reviewed during an individual project.

## Communication Strategy

| Communication Category | Strategy / Details |
|---|---|
| **Target Audience** | Corporate fleet procurement managers, EV pricing and product analysts, and a faculty reviewer. |
| **Key Message** | EV value depends on price per km of range and battery longevity together. Solid-State and LFP batteries last longest, and the cheapest cost per km sits in two- and three-wheelers and hatchbacks. |
| **Primary Medium (Data)** | Tableau Public dashboard with 9 charts, plus a 5-chapter Tableau Story for the decision narrative. |
| **Documentation Format** | 22 PDF project documents, with the dashboard screenshots embedded in the relevant reports. |
| **Presentation / Demo** | Screen-recorded walkthrough of about 6 minutes covering the problem, data flow, dashboard and story. |
| **Frequency** | One review of the dashboard at the end of each sprint, and one final review before the demo. |
| **Feedback Loop** | Self-review checklist after each sprint, then a peer or faculty review of the near-final dashboard. Changes are logged in the Stakeholder Communication Matrix (document 04). |

## Communication Principles

- Lead with the answer: every chart title states the topic, and the notes beside it state the finding.
- One idea per chart: no chart should need more than a few seconds to read.
- Same colours for the same category on every chart, so the viewer does not have to relearn the legend.
- Say what the data cannot show: differences between regions and customer ratings are small, so the dashboard avoids over-claiming.
